(57)Abstract:

PURPOSE: To collect time cards by person and month easily and to confirm the working status by storing a specific registration number read from a card reader and a clock data representing a date at card reading into a data memory.

CONSTITUTION: A control section 4 receiving the operation command 14 commanding the reading as a time card from an operation section 5 allows a card reader 1 to read the registration in number specific to a card based on a card reader control signal 15 and writes it into a data memory 2 based on a data memory control signal 16 together with a count data 17 at card reading as a specific registration number data 11. The operation section 5 gives an operation command 14 commanding the print-out to a specific registration number to the control section 4 to apply formatting for the registration number and count data specific and registered already based on the data memory control signal 16 as the time card and prints it out to a local printer 6 as print-out information 19.
